- › Learn about the offshore wind industry
- › Get an overview of the US Wind project
- › Learn what opportunities are available for MBEs
- › Get questions answered by US Wind reps

US Wind was founded in 2011 and has established its position as Maryland's leader in offshore wind development. In 2014, US Wind obtained a federal lease for site control to develop approximately 1.5 GW of offshore wind power generation off the coast of Maryland. In 2017, US Wind won an Offshore Renewable Energy Credit (OREC) award to build a 270 MW offshore wind facility in their lease area.
